Lambda Calculus

Abstract Syntax

$$X = \{x, y, z, \dots\}$$
 — variables

$$C = \{\mathtt{X}, \mathtt{Y}, \mathtt{Z}, \dots\} - \mathrm{constructors}$$

$$\begin{array}{cccc} \Lambda = & X & - \text{ variable} \\ & | & C & - \text{ constructor} \\ & | & \lambda X. \Lambda & - \text{ abstraction} \\ & | & \Lambda \Lambda & - \text{ application} \end{array}$$

Normal Order Reductions (Big-Step)

Substitution:

$$x[z \leftarrow B] = \left\{ \begin{array}{l} B & , \quad z = x \\ x & , \quad z \neq x \end{array} \right.$$

$$X[x \leftarrow B] = X$$

$$(M \ N)[x \leftarrow A] = (M[x \leftarrow A])(N[x \leftarrow A])$$

$$(\lambda z.B)[x \leftarrow A] = \left\{ \begin{array}{l} \lambda z.B & , \quad z = x \\ \lambda z.(B[x \leftarrow A) & , \quad z \neq x \end{array} \right.$$

Reduction rules:

$$x \to x, \ x \in X \cup C$$
 [VAR]

$$\frac{A \to A'}{\lambda x. A \to \lambda x. A'}$$
 [ABS]

$$\frac{A[x \leftarrow N] \to K}{(\lambda x. A) N \to K}$$
 [RED]

$$\frac{M \to \lambda x.A, \ A[x \leftarrow N] \to K}{M \ N \to K} \tag{APP}$$

$$\frac{M \to M', N \to N'}{M N \to M' N'}, M' \neq \lambda x. A$$
 [ARG]
