Lambda Calculus

Abstract Syntax

$$X = \{x, y, z, \dots\}$$
 — variables

$$C = \{\mathtt{X}, \mathtt{Y}, \mathtt{Z}, \dots\} - \mathrm{constructors}$$

$$\begin{array}{lll} \Lambda = & X & - \text{ variable} \\ & | & C & - \text{ constructor} \\ & | & \lambda X. \Lambda & - \text{ abstraction} \\ & | & \Lambda \Lambda & - \text{ application} \end{array}$$

Call by Value (Small-Step)

Substitution:

$$x[z \leftarrow B] = \begin{cases} B &, z = x \\ x &, z \neq x \end{cases}$$

$$X[x \leftarrow B] = X$$

$$(M N)[x \leftarrow A] = (M[x \leftarrow A])(N[x \leftarrow A])$$

$$(\lambda z.B)[x \leftarrow A] = \begin{cases} \lambda z.B &, z = x \\ \lambda z.(B[x \leftarrow A) &, z \neq x \end{cases}$$

Reduction rules:

$$(\lambda x.A) B \to A[x \leftarrow B], B \text{ is in a normal form}$$
 [RED]

$$\frac{M \to M'}{M N \to M' N}$$
 [APP]

$$\frac{N \to N'}{M \ N \to M \ N'}, \ M \ \text{is in a normal form} \tag{ARG}$$
